

IDModeling is thankful to continue our growth, and we are pleased to announce the opportunity for exceptional people to join our team.

about IDM

IDModeling is a team of dedicated and experienced water and wastewater hydraulic modeling technologist, industry experts, and GIS analysts who provide a variety of hydraulic modeling, systems planning, and GIS services for water and wastewater utilities throughout the country. The culture at IDModeling is quite unique to our industry. You will be part of a talented group of professionals who are passionate about providing solutions for our clients that utilize a combination of engineering experience and software expertise, with the latest in technology the industry has to offer. You will have the opportunity to work in an environment where the bar is raised on a daily basis and your technical abilities, depth of knowledge, client-focus, and commitment to team will be encouraged and appreciated in a company that values recognition.

...looking for a project manager

The ideal individual will be highly-skilled, motivated, client and team focused, and ready to fill the role of Project Manager. The focus of this position is to manage a dedicated, passionate group of hydraulic modelers & planners who have committed their careers to growth in this specialized field, while delivering internal and external technical guidance and best-management practices for hydraulic modeling, system evaluations, and water/wastewater planning activities.

qualifications

- 12 to 20 years of experience with hydraulic modeling, water & wastewater system behavior, planning, utility operations, and GIS applications

- Experience developing, monitoring, and managing projects, budgets, schedules, and teams
- Experience with the MWH Soft-Wallingford, Bentley Systems-Haestad Methods, suite of modeling software - Water & Sewer modeling applications (preferred candidate will have experience with multiple platforms)
- Experience with GIS software (AutoCAD Map, ArcGIS, or similar)
- Licensed Professional Engineer
- Team-oriented work ethic with high level of personal accountability
- Experience or desire to learn and utilize web-based communication applications
- Excellent time and data management, communication, and interpersonal skills
- Enthusiastic about learning, pushing technical boundaries, and finding new, innovative solutions
- Demonstrated ability to work intensively, communicate openly, and coordinate efficiently within a team-focused environment, for the benefit of company growth and team success

our culture

We operate in culture of client-focus, team-building, and recognition in which everyone brings a unique set of experiences to the table and has the potential for rapid professional and personal growth. If you share these qualities and have a desire to recognize your potential, then IDModeling is looking for you.

location

This position has the potential to be location independent; however preferred locations are in Southern California, Kansas City-MO, Wakefield-RI, Denver-CO, or Seattle-WA.
